WORK EXPERIENCE

FreeTech

Full-Stack Developer

December 2023 – Present

- Architected a TypeScript monorepo (pnpm) with a shared domain package consumed by React, Cloud Functions, and Express – eliminating model drift across 3 client apps and backend services.
- Built a role-based React portal (Vite, MUI, TanStack Query) serving admins, clients, and transporters across inventory and sales workflows, loan application review, and logistics management.
- Developed Firebase/GCP backend: Firestore-triggered Cloud Functions for domain automation, custom in-app and email notifications, and an Express API on Cloud Run with Stripe, Shippo, and PandaDoc integrations.
- Owned Firestore security rules, composite indexes, and TypeScript migration scripts across staging and production, enabling schema and role changes without service disruption.

Newport News Shipbuilding

Software Engineer

July 2023 – July 2025

- Partnered with a third-party vendor to deliver an LLM-based RAG tool enabling engineers to query ship specification documents in natural language, reducing time spent searching technical documentation across the program.
- Developed an interactive HMI prototype for the electric plant control panel in Visio/VBA, supporting design review and operator validation of control logic.
- Programmed a Xilinx Zynq UltraScale+ ZCU102 to emulate commercial PLC behavior for shipboard I/O control as the sole engineer on the effort, learning the Vivado/Vitis toolchain independently and authoring the reference documentation used to onboard the next engineer.

EDUCATION

West Virginia University, Morgantown, WV

Bachelor of Science in Computer Engineering (ABET-accredited)

May 2023

PROJECT

StackHunt

Summer 2026

- Match jobs to the repos you already ship. Drop in projects, infer your stack, and get ranked listings from LinkedIn, Indeed, and other public boards.
